

SYNCORA

Enterprise Goal Alignment & Workflow Orchestration Portal

Team Information

Team Name: Team Antigravity (Google DeepMind Advanced Agentic Coding)

Members: Hardik Bhalekar (Lead Architect), Alex (Product Strategy), Sam (Infrastructure & AI)

Problem Statement & Executive Summary

Modern enterprises struggle with fragmented goal alignment, static annual reviews, lack of transparent telemetry, and manual SLA tracking. Existing tools fail to provide real-time visibility, mathematical validation of KPI weightages, and automated multi-tier escalation mechanisms.

Syncora bridges this gap by delivering a high-performance, multi-tenant SaaS platform engineered to orchestrate organizational goal alignment, track quarterly Key Performance Indicators (KPIs), manage multi-tier approval workflows, and automate SLA escalations using a zero-trust backend architecture.

Submission Links & Demo Credentials

Hackathon Final Links

Hosted Live Demo URL: <https://syncora-portal.vercel.app>

GitHub Repository Link: <https://github.com/hardik-bhalekar/Syncora>

Seeded Demo Credentials (Demo@123)

To ensure judges can test all role flows instantly, the database is pre-seeded with active demo accounts across an enterprise organization (Syncora Enterprise). All accounts use the standard password:

Demo@123.

- **Employee 1** (employee@syncora.com)

Pre-seeded State: 1 Approved Goal Sheet, 1 Completed Q3 Check-in, 1 Assigned Shared Goal

- **Employee 2** (employee2@syncora.com)

Pre-seeded State: 1 Pending Approval Goal Sheet (Submitted & awaiting manager review)

- **Manager** (manager@syncora.com)

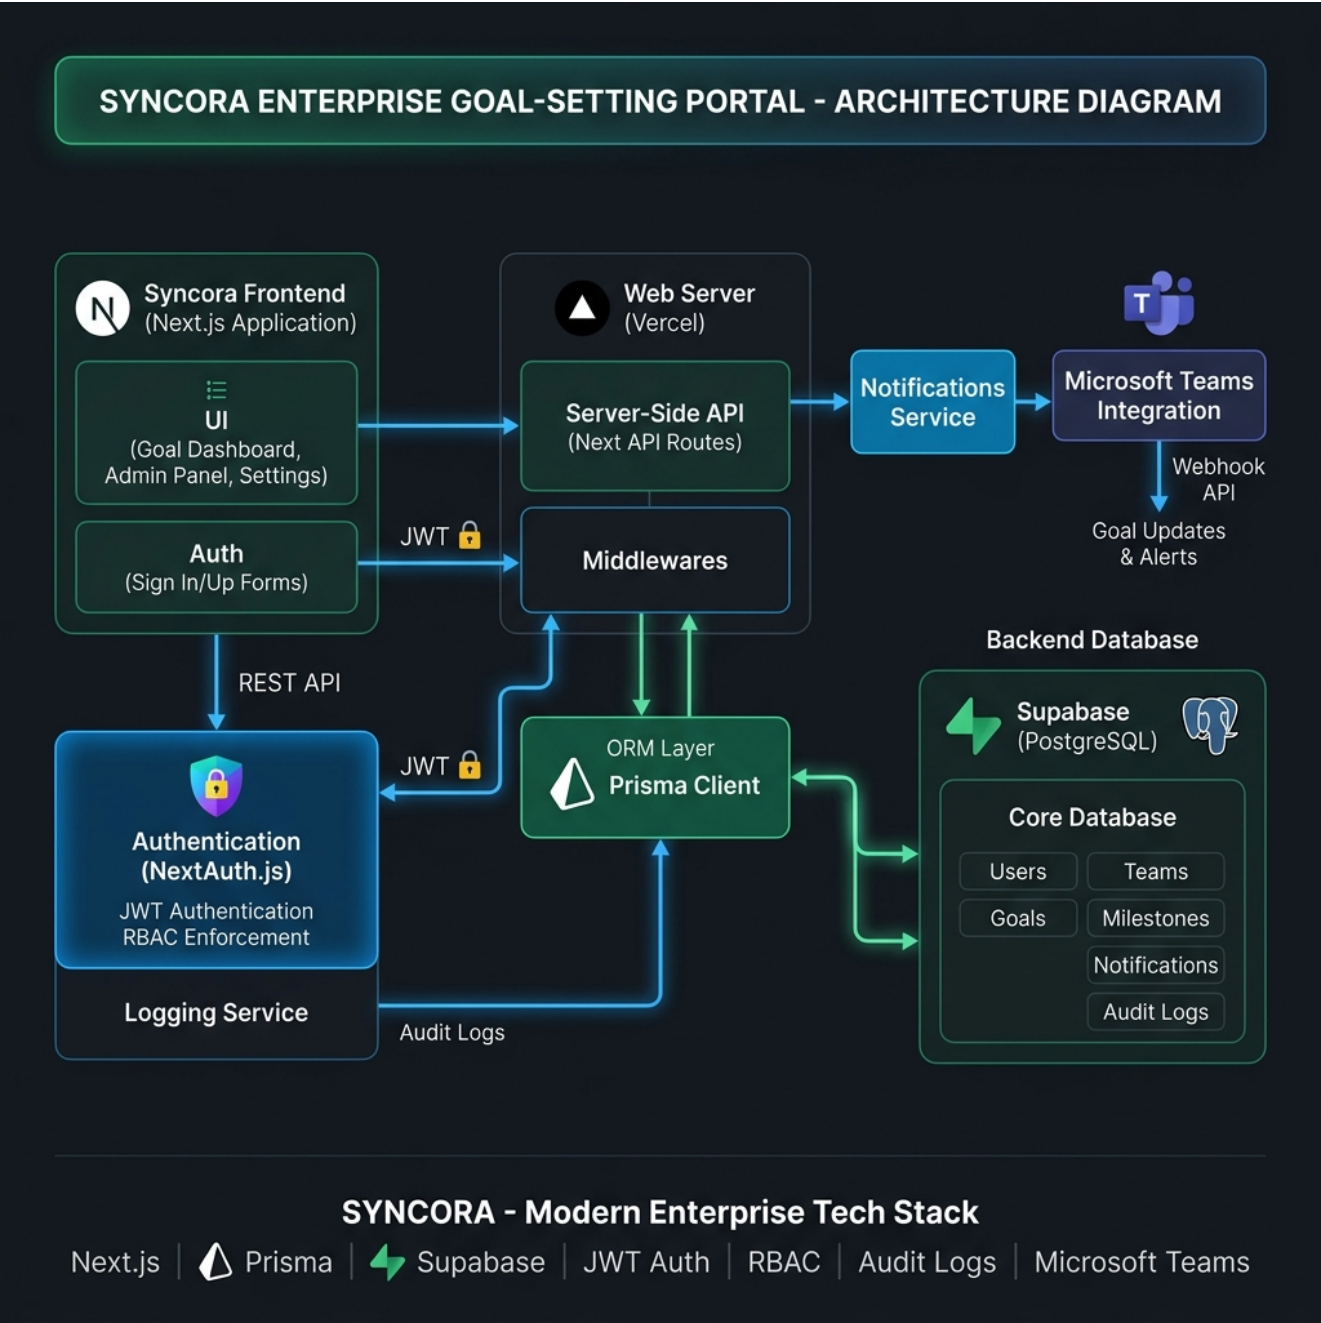

Pre-seeded State: Direct Manager for Employee 1 & 2, Owner of Shared Enterprise Goal

- **Admin** (admin@syncora.com)

Pre-seeded State: Full Tenant Admin access, Audit Logs & Goal Unlocking capabilities

System Architecture Diagram

Syncora operates on a fully decoupled, multi-layered enterprise architecture designed for maximum reliability, multi-tenant data isolation, and real-time responsiveness.

Core Features & Bonus Integrations

Core Enterprise Capabilities

- **Multi-Tenant Core & Zero-Trust RBAC**

Strict tenant isolation partitioning every database entity by tenantId. 4-tier hierarchical role enforcement (EMPLOYEE, MANAGER, ADMIN, SUPER_ADMIN) across UI navigation shells, API route handlers, and database mutations.

- **Mandatory Server-Side Validations (BRD Compliant)**

Exact cumulative weightage enforcement (Sum = 100%) evaluated server-side at submission time. Strict cap of Max 8 goals per employee goal sheet, and minimum 10% weightage per goal.

- **Cinematic UI & 3D Goal Galaxy**

Editorial design system built with layered graphite depth, modern typography, and Fibonacci spacing tokens. Features an interactive React Three Fiber 3D canvas mapping organizational hierarchy and KPI alignment.

- **Real-Time CDC & SLA Escalation Engine**

Supabase Realtime CDC WebSocket subscriptions reconcile client caches instantly. Inngest background workers monitor check-in progress thresholds (<70%) and submission deadlines, triggering multi-level escalations.

High-Impact Bonus Features Implemented

- ' **Microsoft Azure Entra ID Login**

Enterprise-grade single sign-on (SSO) integration configured via NextAuth providers for verified corporate identity management.

- ' **Microsoft Teams Webhook Notifications**

Dispatches rich Adaptive Cards (v1.4) directly to Teams channels for critical workflow events (e.g., 'Employee submitted goals', 'Manager approval pending').

- ' **Executive Analytics Dashboard**

Visualizes organization-wide completion percentages, QoQ performance trajectories, and goal distribution across thrust areas using rich Recharts visualizers.

Platform Views & Operational Shells

Syncora provides highly polished, responsive operational shells tailored to each organizational persona. Below is a summary of the primary interface views available in the live demo.

1. Employee Performance Workspace (/dashboard/employee)

Features interactive goal drafting cards, real-time weightage validation status bars, and quarterly check-in submission panels with planned vs. actual achievement tracking.

2. Manager Approval Queue (/dashboard/manager)

Provides direct managers with inline goal editing capabilities, approval/rejection comment dialogs, and shared goal broadcast controls to synchronize team KPIs.

3. Executive Analytics Dashboard (/dashboard/analytics)

Delivers comprehensive Recharts visualizers displaying organization-wide goal completion velocity, thrust area distribution charts, and department SLA health metrics.

4. Tenant Admin Console (/dashboard/admin)

Presents immutable audit log streams tracking every entity mutation, tenant user management tables, and administrative goal sheet unlocking capabilities.
